

Do you think there has ever been life on Mars?

We will be doing adventures based on NASA science where your young scientist will explore hazards on Earth and in space, then make a plan to mitigate hazards on a NASA mission!!

These adventures were designed to be inclusive. We invite you to share your own, your child's, and your community's knowledge on this topic.

How has a big new discovery impacted your life?

Can you share a story with our program?

WAYS TO GET INVOLVED

- Reach out to your program to share knowledge or suggest someone else who might do this.
- Come to the Science Showcase.
- Share what you know with your child at home. See the story prompts on the back.
- Scan the QR code to the right or visit <https://planets-stem.org/> to learn more.

Pick 1 or 2 story prompts to discuss at home

Can you tell me a story about...

... how you use science and engineering to avoid hazards at home?

... a hazard you have experienced and what you did to mitigate it?

... a time when you mitigated a hazard in your neighborhood?

... a problem you have faced that is similar to a hazard in space?

... a time you shared your ideas with a community before?

...something in the night sky?

Make it a two-way conversation:

What questions do you have about the science activities I am doing in my program?
