

Movement Challenge Instructions

1. As a group, choose one property of the planetary bodies, such as gravity or amount of water. Choose a movement everyone can do to represent that property.
2. Shuffle the cards and deal one secretly to each person.
3. Have each person do the movement a number of times equal to the value that body has.

For example, if the gravity value is 5, do the movement 5 times.
If the gravity value is 0.5, do the movement halfway.
