

SCIENCE *NOTEBOOK*

Activity 4 **Putting the Data Together**

Now consider the image data, mineral data, and topographic data together and choose three sites you would recommend to NASA to land a rover on Mars. Remember, NASA is looking for scientifically interesting sites that have evidence of water-related minerals, and are also safe to land. Make sure to note the evidence you find to support your ranking for each site.

Site 1: Why do you think this is the best site to explore?

Site 2: Why do you think this is a good site to explore?

Site 3: Why do you think this is a good site to explore?

SCIENCE *NOTEBOOK*

Activity 4 **Make the Case for Your Site**

Use the evidence you collected to prepare an argument for NASA, convincing them why they should send the rover to explore your top site. Use the space below to write or draw your response.
